

Tipaloy

Testing your welds is a key component in generating quality parts for your customers. Let Tipaloy's T-Peel take the grunt work out of peel testing! Safe and easy to use, the T-Peel allows the user easily peel material to see nugget penetration without damaging their hands. Simply spread the material slightly, pinch down on the material with the T-Peelers and roll back. It's that easy and fast!

Step 1

Place the part to be peeled with the spot to be checked held as close to the vice as possible. This allows for heel of the tool to fold the part back against the vice jaws. This may require bending the part over with a hammer or other tool.

Step 2

Using two hands grab the part with the T-Peeler and begin to force the parts against the jaws.

Step 3

Continue rolling the T-Peeler as shown in the picture and the nugget is exposed.

Step 4

Observe the welded area, and check against specifications for nugget size.
