

RoMan Products

RoMan Manufacturing designs and manufactures thousands of transformers, power supplies, and accessories for a variety of applications across a wide array of industries. Below is a sample listing of our transformers, power supplies, and product accessories.

Automotive Resistance Welding Products

We design and manufacturer three types of water-cooled transformers for the Automotive market. They include: MFDC, AC and DC/Low Frequency. Our transformers can be integrated with any brand of controls, weld-guns or robotic systems.

Industrial Resistance Welding Products

We design and manufacturer three types of water-cooled transformers for the Industrial Resistance Welding market. They include: MFDC, AC and DC/Low Frequency transformers. The transformers can be custom designed to meet your resistance welding application requirements—from small spot welds to large projection welds.

DC Power Supply/Rectifier

DC Power Supply/Rectifier water-cooled transformers are ideal for high current, long duty-cycle applications—large ring projection, flash-butt and rim welding as well as corrosive plating environments. Available in various voltages and frequencies, the size and capability of our DC Power Supply/Rectifier can be designed to meet your applications requirements.

Glass AC Melting, Boosting, and Forming Transformers

Smaller in size and lighter weight, our water-cooled transformers are used closer to the heat source (close-coupling). Close-coupling improves energy efficiency, while substantially reducing energy, installation, operation and maintenance costs. Available in various voltages and frequencies, our transformers can be designed to meet your applications requirements.
