Furnace Power Supplies & Magnetics

Smaller in size and lighter weight, our water-cooled Power Supplies and Magnetics are used closer to the heat source (close-coupling). Close-coupling improves energy efficiency, while substantially reducing energy, installation, operation and maintenance costs for various industrial heating systems such as Atmosphere, Vacuum, Forging, and others. Available in various voltages and frequencies our Power Supplies and Magnetics can be designed to meet your applications requirements.

Transformer and Power Supply Accessories

We offer a wide array of accessories and related specialty products to support our Water-Cooled Transformers and Power Supplies. The size and capability of our accessories can be designed to meet your applications requirements.

Switch Gear

Specifically designed for industrial use—provides long operating life with low maintenance requirements. Available in single or multi-phase configurations from 100 – 2,500 amps. Size and capability of our Switch Gear can be designed to meet your application's requirements.

Ground Reactors

Provide protection from electrical shock when direct grounding of the secondary circuit is not practical. Typical applications are Portable Welding Gun installations, Transgun installations for robots or Series Welding and Push-Pull welding circuits in multispot welders. Can be used with any resistance welding transformer, regardless of make, model, or age. Available in several sizes and voltage ranges.
